WEIGHT LOSS SERVICES

FEEL YOUR BEST. BE YOUR BEST.

WHAT IS SEMAGLUTIDE?

Semaglutide is an FDA approved medication that belongs to a class of drugs known as glucagon-like peptide-1 (GLP-1) receptor agonists. These drugs work by mimicking incretin, a natural hormone that stimulates insulin release, helping to regulate blood sugar. It works by regulating blood sugar and digestion, curbing appetite, slowing the rate at which the stomach empties, and increasing feelings of fullness after meals. These effects collectively reduce total caloric intake, which is crucial for weight management.

Benefits:

Weight Loss
Reduced Inflammation
Reduced Opioid Usage
Lower Blood Sugar Levels
Lower Blood Pressure Levels
Increased Energy & Improved Sleep
Increased Mental Focus & Clarity
Appetite/Craving/Addiction Regulation
Reduced Caffeine and Alcohol Intake
Effective Non-Surgical Weight Loss Option
Lower Risk of Cardiovascular Events
Improved Condition of Dementia, Pancreatitis, and PCOS

CRYOTHERAPY

Cryotherapy targets your central nervous system sending your body into a controlled and temporary "fight or flight." This causes your body to work really hard to keep your core body warm and protected. After the session, blood vessels dilate and rush oxygen-rich blood and endorphins back through the body. Cryotherapy lowers the core body temperature and, in an effort to warm itself back to equilibrium, the body undergoes a natural metabolic reaction. This speeds up injury healing, helps reduce chronic pain, boosts metabolism for weight loss, recovers sore muscles, sustains energy levels, and more!

Benefits: Weight Loss, Energy, Muscle Recovery, Injury Healing, Relieved Chronic Pain, Reduced Inflammation, Bone Health, Tissue Health, and More!

INFRARED SAUNA

Using near infrared light to heat the body directly raises your core temperature and increases your heart rate—similar to moderate exercise.

A single session can burn up to 200-600 calories as your body works to cool down.

Benefits:

Boost Calorie Burn, Improve Circulation & Muscle Recovery, Improve Skin Health, Promote Detoxification, Reduce Stress, and More!

WHAT IS LIPOSTAT?

Lipostat+ injections are formulated to support weight loss and enhance overall metabolic health. These injections typically contain a combination of lipotropic agents—such as methionine, inositol, choline, and vitamin B6—that work together to promote fat metabolism and energy production.

- **Enhanced Fat Metabolism:** The lipotropic agents in Lipostat+ help break down fat deposits, facilitating the removal of fat from the liver and promoting efficient fat metabolism.
- **Increased Energy Levels:** By converting fat into usable energy, these injections may provide a natural energy boost, helping you feel more focused and productive throughout the day.
- **Improved Liver Function:** The ingredients in Lipostat+ support liver health by aiding in detoxification and reducing the risk of liver-related issues.
- **Enhanced Metabolism:** Lipostat+ may help boost your metabolism, assisting in the more efficient burning of calories and supporting weight loss efforts.
- **Appetite Control:** Some components of Lipostat+ can aid in appetite suppression, making it easier to adhere to a healthy eating plan.

Additionally, maintaining a balanced diet and regular exercise routine are crucial components of any weight loss strategy management.

AMINO INJECTIONS

A beautiful blend of Lysine, Arginine, Glutamine, and Proline to improve:

Muscle recovery
Metabolic Health
Joint Pain Relief
Blood Sugar Regulation
Blood Pressure Regulation
Increased Exercise Performance
